

Project experience that understands your needs

The global power mix is evolving, and with this comes an increasing demand for sustainable energy sources. We are proud to have installed over 560 MW of clean power since 2013. As a leader in the renewable power sector in South Africa, our business continues to strive for uncompromising excellence, performance and the delivery of new installations, refurbishments, and the maintenance of photovoltaic (PV) solar plants.

One of the unique ways in which we do this is by managing and coordinating multiple interfaces between our in-house teams as well as our subcontractors, ensuring cost-effectiveness and that our customers have a single integrated team that serves their projects, sitewide.

What we offer

- ^ Construction and sub-EPC (engineering, procurement & construction services)
- ^ Managing of multi-disciplinary interfacing
- ^ Installation of major electrical equipment and cabling
- ^ Supervisory control and data acquisition (SCADA) system installations
- ^ Sub-structure installations
- ^ Civil works

- ^ Procurement of balance of plant materials and equipment
- ^ Commissioning
- ^ Commissioning support to original equipment manufacturer (OEM's)
- ^ Operation and maintenance
- ^ Facility inspections

Sub-EPC contractor

- ^ Electrical, mechanical, civil engineering and construction
- ^ Supervisory control and data acquisition (SCADA) development
- ^ Facility management

Integrated project management experience

We have the expertise to deliver an integrated project management experience that is focused on a one-team approach and is fueled by passion and commitment to your project success. Our highly skilled project management team follows a hands-on approach to ensure your innovative end-to-end construction solutions are managed effectively, from the blueprint to the build.
